## KEY PROJECTS

### **ShopperBuild SaaS (Software As a Service)** (Angular 13, NodeJs, Grapesjs, Digitalocean)

ShopperBuild is an Ecommerce Software as a Service (SaaS) company that empowers suppliers to expand their online presence with robust ecommerce solutions. Their platform features a powerful ecommerce builder with drag-and-drop functionality, allowing users to customize their stores effortlessly. ShopperBuild offers a user-friendly interface, multiple themes, and extensive customization options for creating professional websites. Key features include a comprehensive dashboard for analytics, 24/7 expert support, tools for payment reconciliation and GST reports, as well as support for shipping, payment acceptance, web analytics, and SEO, aimed at helping businesses succeed online.

#### **Responsibilities:**

- Working as a Senior FullStack Developer
- Gathering requirement from Business Analytics, understanding requirement and developing application
- I am responsible person to integrate any new plugins/features in software like ShipRocket / RazorPay Payment / Coupon Code Promotion Integration
- Discuss with Team about the Sprint(weekly task), divide the work with team daily basis, after completing task, send it QA team for testing
- Involved in peer code review and troubleshooting the technical issues
- Developed an ecommerce website builder using grapesjs library.

### **E42** (Angular 8, Javascript, Python)

E42 -a Platform as a Service (PaaS) offering from Light Information Systems. The project is related to chatbots having features like AI. By creating a bot the website owner can design, style & set the flow as they want it's all dynamic, and the end-users can use/interact with the chatbot and use the dynamic flow to solve their queries

#### **Responsibilities:**

- Daily stand up call with Client regarding completing task, Ongoing task, and new sprint planning.
- Check UI/UX screen on `FIGMA` and convert the screen in Responsive html and integrate it into Angular 8
- Develop the module as per the design.
- Create the design as per the client requirement.
- Implemented new features as per user feedback point.

## **DealTrack** (Angular 11, Php, Ngxs)

Dealtrack application's main purpose is to provide a bridge between the gap in the operation of the real estate buying and selling. where the lawyer, agent and user communicates, tracks, stores documents related to the property deal among other features it offers.

### **Responsibilities:**

- Daily communication with client on Team(Google Meet), Gathering requirement and taking task from JIRA and Sprint plan discussion
- Custom sharable tables, filters,sorting and pagination, Core Component and module creations instead of any third party package.
- NGXS based code pattern and API creation
- Create the Responsive page as per the figma UI screen.
- Angular material for UI component
- Daily stand meeting with Client regarding completing task, Ongoing task, and new sprint planning.
